PROGRAMME TOPICS

The conference creates an interdisciplinary platform for the collaboration of experts from a number of theoretical, preclinical and clinical disciplines dealing with the diagnosis and treatment of malignant tumours.

The programme will focus on the following topics in particular:

- Predictive and prognostic pathology
- Oncopathology
- Novel anticancer drugs
- Medicinal chemistry of anticancer drugs
- Molecular basis of the effect and toxicity of anticancer drugs
- Chemoprevention of cancer
- Tumour chemoresistance
- Mistakes and errors in diagnosing cancer
- Predictive factors
- Advances in clinical diagnosis of malignant tumours
- Cancer genomics and proteomics
- Tumour pathogenesis
- Targeted biological therapy
- Translational research in oncology
- Varia

The programme will include awards for the best paper and poster.
